

Algorithm: Total and Average of Five Subject Marks

Purpose: To read marks of five subjects through command-line arguments and calculate the total and average.

Algorithm

- 1 Start.
- 2 Read five subject marks from the command-line arguments.
- 3 Convert the command-line arguments from String to integer.
- 4 Calculate the total using: **Total = Mark1 + Mark2 + Mark3 + Mark4 + Mark5.**
- 5 Calculate the average using: **Average = Total / 5.0.**
- 6 Display the total marks.
- 7 Display the average marks.
- 8 Stop.

Example

Input: 80 75 90 85 70

Total = 400

Average = 80.0
